# Digi-ID: One-Page Introduction

Authored by the DigiByte Community.

Latest revision:  
September 2026

Digi-ID is an open-source sign-in protocol. On a website or app that supports it, users scan or tap a QR code and approve the request in a compatible app. The app sends a digital signature that the service checks before granting access.

### **Why use Digi-ID?**

When Digi-ID replaces a website password, users have one less password to remember or reuse. They approve sign-in on their device instead of typing a password into the website. They may still need an app PIN and a recovery backup.

### **Keep existing accounts**

A service can let users add Digi-ID to an existing account after confirming that they control that account. Users do not have to create a new account if the service supports this linking process.

Digi-ID can replace a standard password sign-in or be offered alongside it. Offering two sign-in choices does not automatically add a second security check.

### **Understand the security benefits**

Digi-ID uses public key cryptography: the user's app holds a private key and creates a signature the service can verify. Verification does not require a DigiByte blockchain connection.

Removing password sign-in reduces password-related risks. It does not prevent every account takeover or data breach. Devices, recovery methods, sessions, and customer data still need protection.

### **Plan the setup and costs**

The Digi-ID project is open source and describes the protocol as free to use. Development, hosting, support, and maintenance may still cost money.

PHP and JavaScript examples are available. Before choosing a library, plugin, or app, check that it is compatible with your platform and still supported. Setup time depends on your service and its account-management needs.

## Development Support:

Developer channels exist on Telegram, Discord, and Gitter. GitHub Discussions on the DigiByte Core repository is another route for development questions:

[https://app.gitter.im/#/room/#DigiByte-Core\\_community:gitter.im](https://app.gitter.im/#/room/#DigiByte-Core_community:gitter.im)

## Updates / New Releases:

We recommend subscribing to the GitHub repository to keep informed about all updates, releases, and any information pertaining to DigiByte development.

Watch the Digi-ID reference repositories for changes:

<https://github.com/DigiByte-Core/digiid-php>

<https://github.com/DigiByte-Core/digiid-js>

For DigiByte Core node releases, which are separate from Digi-ID, see:

<https://github.com/DigiByte-Core/digibyte/releases>

## General Questions:

If you have any questions about this documentation or wish to communicate with DigiByte community support, reach out to [@DigiAwareness\\_](#) with requests.
